Computer Science
**Undergraduate Researcher**

**Job Description**
The Institute for Sensing and Imbedded Network Systems Engineering is looking for an undergraduate computer science researcher to join a team looking to build a museum exhibit for the South Florida Science Center. The position is part of the I-SENSE engineering team and has the possibility of turning into a longer-term position.

**Responsibilities**
- System architecture
- Data analysis, interpretation and visualization
- Graphical User interfacing
- Common responsibilities also include supporting the rapid prototyping capabilities of the lab

**Other Preferred Knowledge/Skills**
- PCB design and assembly
- Embedded Systems experience
- Arduino Programming

The ideal candidate will be a strong technical communicator and good team player with a desire to learn and grow.
